M [(1)]	Localization	DU Title	DU identification	DU date
R	PRO-NOR-SOP-04	**ADIRS**	00022626.0014001	02 MAY 23
	Criteria: P12909, P20614, P21265, P6985, P8194 **Applicable to: MSN 10949-11139** *Impacted DU: 00011159 ADIRS*			
	Reason for issue: *This TDU is issued to inform Operators that with some dedicated FWC standards, some systems that depend on ADIRS data might generate spurious alerts until at least one IR mode selector is switched to NAV.*			
R	PRO-NOR-SOP-06	**Overhead Panel**	AIL-00001813	
R	PRO-NOR-SOP-06	**Overhead Panel - RCDR**	00021691.0006001	02 MAY 23
	Criteria: PW1100G-JM, P12301, P20095, P20327 **Applicable to: MSN 08495-08635** *Impacted DU: 00015476 Overhead Panel - RCDR*			
	Reason for issue: *On A320neo Family aircraft, before engine start, the RCDR GND CTL pb-sw may revert to AUTO in the case of electrical transient between EXT PWR and APU GEN. In that case, the flight crew must set the RCDR GND CTL pb-sw back to ON.*			
R	PRO-NOR-SOP-08	**Automatic Engine Start**	00022757.0001001	02 MAY 23
	Criteria: PW1100G-JM, P15967 **Applicable to: MSN 08495-09324, 10949-11139** *Impacted DU: 00010162 Automatic Engine Start*			
	Reason for issue: *This temporary documentary unit adds information about the indications to be displayed before pressing the dual cooling pb-sw in order to avoid the "dual cooling not avail" message while the operating envelope is respected. If the pb-sw is pressed before the cooling times for both engines is displayed this message will appear. This issue is planned to be fixed with the introduction of subsequent EIU and FCS software updates.*

Continued on the following page

Continued from the previous page

M [(1)]	Localization	DU Title	DU identification	DU date
	Reason for issue: *When the MULTISCAN sw is in the AUTO position (tilt in automatic mode) and the GAIN is set to CAL (automatically calibrated), the radar display may not entirely correspond to the current weather. Therefore, this Temporary DU is issued to indicate that, when the MULTISCAN sw is in the AUTO position, the GAIN should be manually set to +8 to ensure that the radar display provides an optimum reflection of the current weather condition.* *In addition, the flight crew should temporarily set the MULTISCAN sw to MAN, if:* *- The weather is good, or not significant, in order to check that the radar is operating correctly* *- The weather display is ambiguous or unexpected, in order to better analyze the weather situation.* *When the MULTISCAN sw is in the AUTO position and the GAIN is manually set, the Path Attenuation Compensation (PAC) alert is not available. However, the radar display corresponds to the current weather conditions, when the aircraft is above FL 150.* *Therefore, the flight crew can set the GAIN back to CAL, when the aircraft is above FL 150.*

<tr><td></td><td colspan="4">*Reason for issue:*
When in the AUTO position, the MultiScan AUTO mode adjusts the tilt according to the altitude of the aircraft.
In cruise, MULTISCAN function provides a large view of the weather ahead, ie display of weather cells located on and below aircraft path.
At low altitudes (below FL 200), the tilt is adjusted upward to manage clutter from strong ground targets. In some cases, the weather may be low-lying and therefore may be below the radar beam and not be displayed until the aircraft descends closer to the precipitation level.
Therefore, this Temporary Revision is issued to indicate that, when the Multiscan is in the AUTO position, the GAIN should be manually set to +4 when the aircraft is below FL 200.

In addition, the flight crew should temporarily set the MULTISCAN sw to MAN, if:
- If the weather is good, or not significant, in order to check that the radar is operating correctly: down tilt until displaying ground echoes
- The weather display is ambiguous or unexpected, in order to better analyze the weather situation using manual tilt according to standard technique
- In particular below FL 200, for situations with low-level weather, weather with low reflectivity or in front of suspected active cells, the flight crew should switch to Manual mode and adjust the tilt setting downward until the weather is detected or the ground clutter appears on the upper part of the display.

In addition, the flight crew may increase the manual gain control to display lower reflectivity targets. The manual gain control can be increased in both AUTO and Manual modes to display lower levels of weather. In both cases, ground clutter may also be displayed as a result of low settings and/or increased gain.</td></tr>

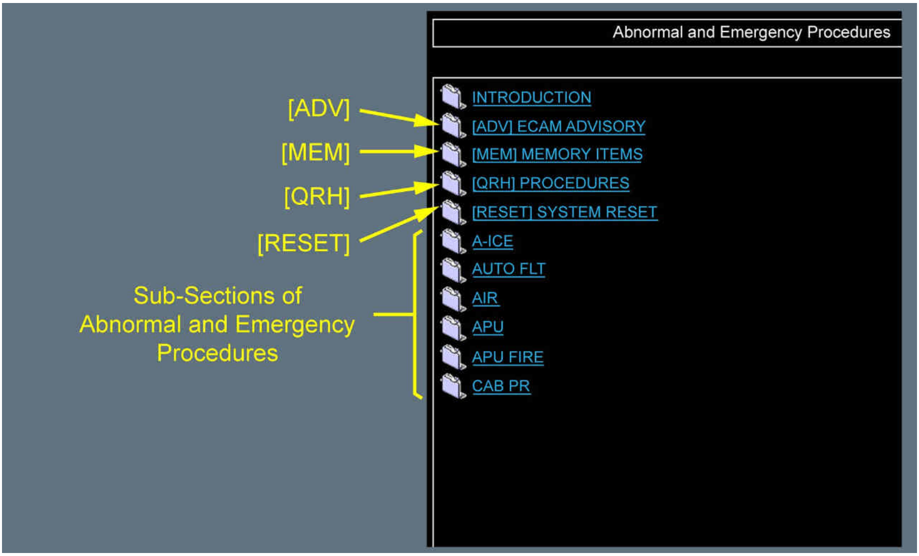
CONTENT

Ident.: PRO-ABN-ABN-00-00020862.0001001 / 09 NOV 20
Applicable to: ALL

Abnormal and Emergency procedures involve actions that the flight crew must perform to ensure the overall safety of the flight, and adequate workload.

L2 For more information about the management of abnormal operations, *Refer to FCTM/AOP-30-10 Introduction*.

Abnormal and Emergency Procedure Overview



Abnormal and Emergency Procedures
[ADV]
[MEM]
[QRH]
[RESET]
Sub-Sections of Abnormal and Emergency Procedures
INTRODUCTION
[ADV] ECAM ADVISORY
[MEM] MEMORY ITEMS
[QRH] PROCEDURES
[RESET] SYSTEM RESET

AIR
APU
APU FIRE
CAB PR

L1 [ADV] ECAM ADVISORY

The [ADV] ECAM ADVISORY section provides direct access to the list of all advisories that can be displayed on the ECAM SD pages. The [ADV] section is also available in the QRH.

L2 For more information, *Refer to [ADV] ECAM Advisory*.

L1 Advisories are system parameters that start to deviate from their usual operational range. However, an advisory does not require flight crew actions, except monitoring.

L2 For more information about Advisory function, *Refer to DSC-31-20 System Pages*.

L1 [MEM] MEMORY ITEMS

The [MEM] MEMORY ITEMS menu provides direct access to the list of memory items.

L2 For more information, *Refer to [MEM] Memory Items*.

L1 The content of the memory items are described in the applicable sub-sections of the abnormal and emergency procedures.
Memory items are procedures of an ECAM or QRH procedure that the flight crew must apply by memory to ensure a safe flight path. In some time-critical situations, the flight crew has no time to refer to the ECAM and/or to the QRH.

L2 For more information, *Refer to FCTM/AOP-10-40 Abnormal and Emergency Procedures*.

L1 [QRH] PROCEDURES

The [QRH] PROCEDURES menu provides direct access to the list of all the FCOM abnormal and emergency procedures that are also in the QRH.

L2 For more information, *Refer to [QRH] Procedures*.

L1 The content of the QRH procedures are described in the applicable sub-sections of the abnormal and emergency procedures.

Note: *Only the FCOM version of a procedure provides layer 2 and 3 information for consultation purpose.*

[RESET] SYSTEM RESET

The [RESET] SYSTEM RESET section provides direct access to the table listing all the system resets that are permitted, and the condition to apply them. The [RESET] section is also available in the QRH.

L2 For direct access to the table, *Refer to [RESET] System Reset*.

L1 SUB-SECTIONS OF ABNORMAL AND EMERGENCY PROCEDURES

This part of the FCOM describes the detailed content of all abnormal and emergency procedures.
All procedures are grouped in sub-sections that can be system related (e.g. AIR, FUEL, etc.) or non-system related (e.g. MISC, T.O, CONFIG, etc.).
The sub-sections are sorted by alphabetic order.
For each sub-section, procedures are listed in the following order:

1. The memory items
   The title of the memory items starts with the [MEM] prefix
2. The abnormal and emergency procedures of the QRH
   The title of these procedures starts with the [QRH] prefix
3. The ECAM procedures.

PROCEDURE LAYOUT

Applicable to: ALL

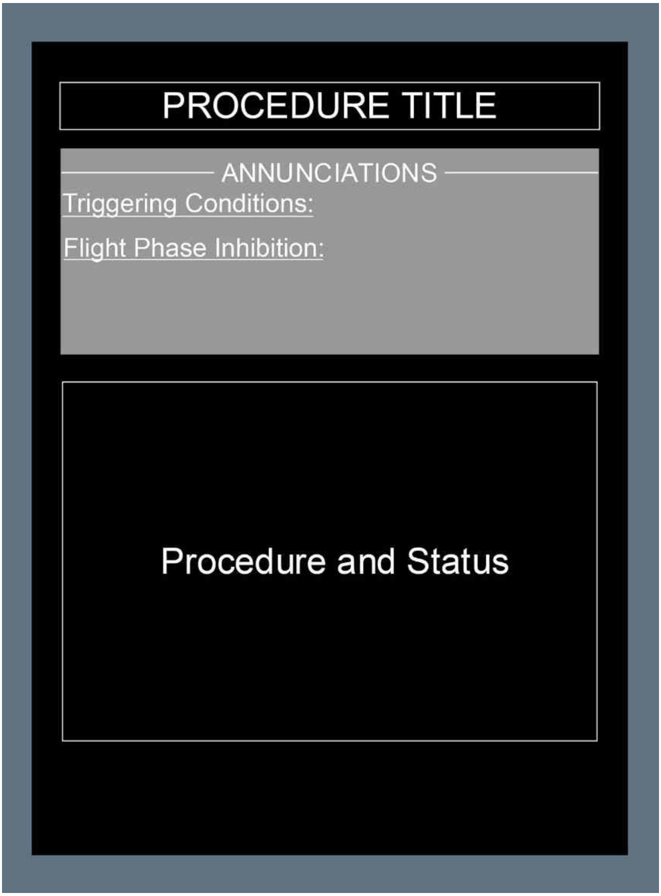
Ident.: PRO-ABN-ABN-00-A-00020863.0001001 / 17 MAR 17

GENERAL

The presentation of procedures is, as far as practicable, identical to the way it is displayed on the ECAM. The abbreviations are identical to those used on the cockpit panels.
All actions and information displayed on ECAM are provided in large letters. Other information, not on ECAM, is provided in small letters.
Expanded information is as far as practicable provided in layer 2. This information:

- Identifies the particular failures
- Explains actions for which the reason is not self-evident
- Provides some background on the reasons and /or the effects of a given action.

FCOM presentation of ABN or EMER procedures



PROCEDURE TITLE
ANNUNCIATIONS
Triggering Conditions:
Flight Phase Inhibition:
Procedure and Status

Ident.: PRO-ABN-ABN-00-A-00020864.0001001 / 17 MAR 17

PROCEDURE TITLE

The title of an abnormal or emergency procedure, displayed on the ECAM, appears on white background.
Abnormal procedure displayed on ECAM (amber caution) :

CAB PR SAFETY VALVE OPEN

Emergency procedure displayed on ECAM (red warning) :

🟥 CAB PR EXCESS CAB ALT 🟥

The title of an abnormal or emergency procedure, that does not appear on the ECAM is on a grey background.
Abnormal procedure not displayed on ECAM :

[QRH] L/G GRAVITY EXTENSION

Emergency procedure not displayed on ECAM :

🟥 [QRH] DITCHING 🟥

SEVERAL ALERTS UNDER THE SAME TITLE

When applicable, several alerts may be grouped under the same procedure title. However, depending on the failure, the actions that the flight crew should perform may differ.

Note: *Alerts that have the same procedure title may be differentiated by a subtitle (e.g. ENG FIRE (On Ground) versus ENG FIRE (In Flight)).*

Ident.: PRO-ABN-ABN-00-A-00020865.0001001 / 17 MAR 17

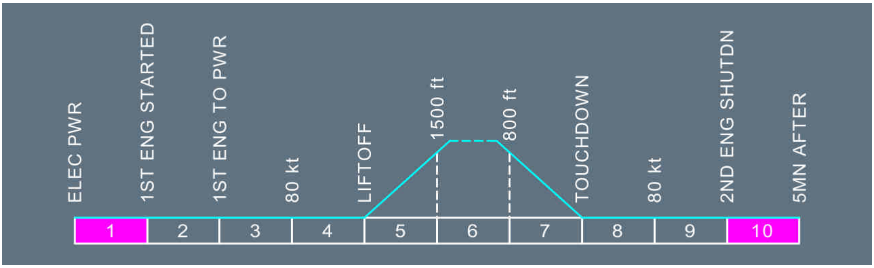
ANNUNCIATIONS

When applicable, the annunciations section provides:

- The triggering conditions, that describe the cause of the alert activation
- The flight phase inhibition.

FLIGHT PHASE INHIBITION

The Flight Phase Inhibition section indicates the flight phases during which the alert is inhibited. In the below example, the alert is inhibited in flight phase 1, and 10.



L2 For more information, *Refer to DSC-31-15 Flight Phases*.

Ident.: PRO-ABN-ABN-00-A-00020866.0001001 / 26 OCT 22

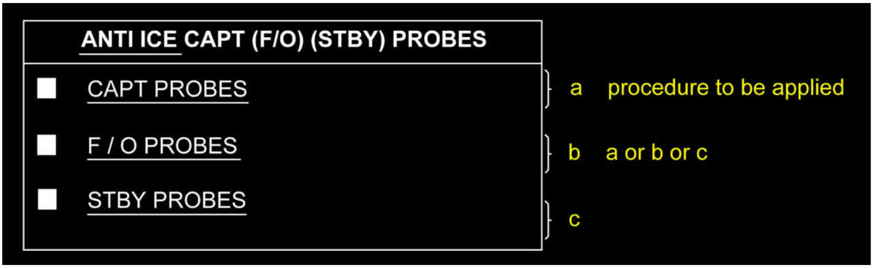
PROCEDURES AND STATUS

The Procedure and Status section provides the procedure and the Status (including approach procedure, limitations, inoperative systems, etc.), with additional information when relevant.

CONDITIONS

BLACK SQUARE

When several procedures appear under the same title, a black square marks the starting point of each procedure.
For example:



ANTI ICE CAPT (F/O) (STBY) PROBES

■ CAPT PROBES

■ F / O PROBES

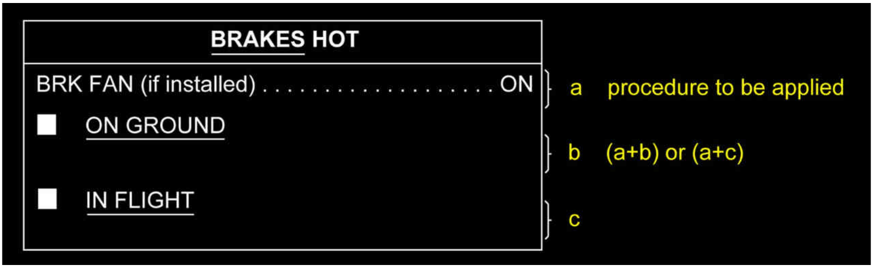
■ STBY PROBES

a procedure to be applied

b a or b or c

c

Black squares also indicate parts of a procedure among which only one is applicable.
For example:



BRAKES HOT

BRK FAN (if installed) . . . . ON

■ ON GROUND

■ IN FLIGHT

a procedure to be applied

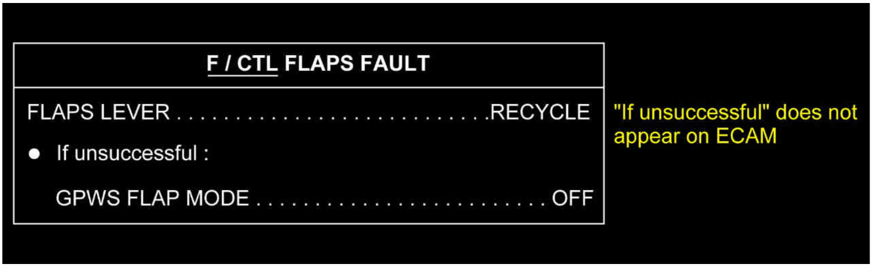
b (a+b) or (a+c)

c

The ECAM does not display black squares.

BLACK DOT

If an action depends on a precondition, a black dot identifies the precondition. If the precondition appears on ECAM, it appears in LARGE LETTERS. If not, it appears in small letters.
For example:



F / CTL FLAPS FAULT

FLAPS LEVER . . . . .RECYCLE

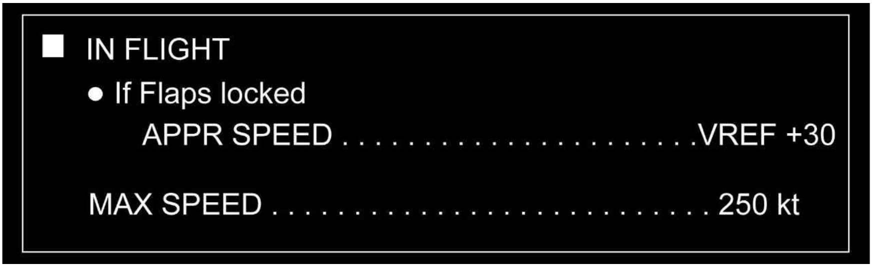
- If unsuccessful :

  GPWS FLAP MODE . . . . OFF

"If unsuccessful" does not appear on ECAM

INDENTATION

Indentation is used in order to identify when an action depends on a precondition/flight phase/procedure.
For example:



■ IN FLIGHT

- If Flaps locked

  APPR SPEED . . . . .VREF +30

MAX SPEED . . . . 250 kt

- The APPR SPEED is equal to VREF +30 kt only if the flaps are locked, because "APPR SPEED......VREF +30" is indented below "• If flaps locked".
- The MAX SPEED of 250 kt does not depend on the flaps locked condition because it is aligned with "• If Flaps locked". Therefore, MAX SPEED has to be respected whether the flaps are locked or not.

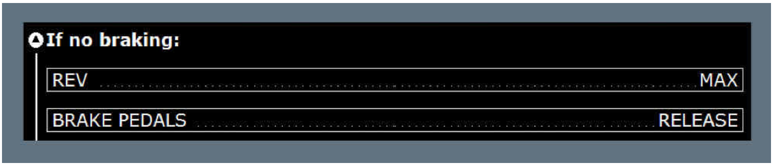
BOXED ITEMS

Items surrounded by a box enable the flight crew to easily identify them, as Memory items, OEB immediate actions or items introduced by “At ANY TIME of the procedure”.

MEMORY ITEMS

Memory items are items that the flight crew must memorize, in order to be able to rapidly apply them, without referring to the ECAM, and/or to the QRH.

Memory items



If no braking:

REV .... MAX

BRAKE PEDALS .... RELEASE

ABNORMAL AND EMERGENCY CALLOUTS

Applicable to: ALL

Ident.: PRO-ABN-ABN-00-B-00011915.0001001 / 17 MAR 17

ECAM PROCEDURES

1. "ECAM ACTION" is commanded by PF when required.
2. "CLEAR __ (title of the system) ?" is asked by the PM for confirmation by the PF, that all actions have been taken/reviewed on the present WARNING/CAUTION or SYSTEM PAGE. e.g.: CLEAR HYDRAULIC ?
3. "CLEAR __ (title of the system)" is the command by the PF that the action and review is confirmed. For status page; REMOVE STATUS will be used.
4. "ECAM ACTIONS COMPLETE" is the announcement by the PM that all APPLICABLE ACTIONS have been completed.
5. Should the PF require an action from the PM during ECAM procedures, the order "STOP ECAM" will be used. When ready to resume the ECAM the order "CONTINUE ECAM" will be used.

Ident.: PRO-ABN-ABN-00-B-00020059.0001001 / 16 JAN 18

EMERGENCY CALL

Some abnormal/emergency procedures require flight and cabin crews to use specific phraseology when communicating with each other. To ensure effective communication between the flight and cabin crews, the standard phraseology may be recalled at the preflight phase.

FROM	TO	PHRASEOLOGY	REMARKS
cockpit	cabin	Passenger Address (PA) System: "PURSER TO COCKPIT, PLEASE!"	The Purser, or any other cabin crewmember, must go to the cockpit
Cockpit	Cabin	Passenger Address (PA) System: "ATTENTION CREW! AT STATIONS!"	An emergency evacuation may soon be required.
cockpit	cabin	Passenger Address (PA) System: "CABIN CREW and PASSENGERS REMAIN SEATED!"	The captain decides that an evacuation is not required

Continued on the following page

Continued from the previous page

cockpit	cabin	Passenger Address (PA) System: "EVACUATE, EVACUATE"	The captain orders an immediate evacuation
cabin	cockpit	Interphone: "PRIO CAPT"	Any crew member can make such a call. The flight crew must reply.

Ident.: PRO-ABN-ABN-00-B-00011916.0001001 / 06 MAY 22

MEMORY ITEMS

The aim of such callouts is to callout the appropriate procedure by calling out, in most cases, the title of the procedure. This will allow the crew to be aware of the situation and be prepared to properly react (crew coordination, task sharing and communication).

GPWS

As soon as avoidance maneuver is envisaged.
"PULL UP TOGA"

REACTIVE WINDSHEAR WARNING

"WINDSHEAR TOGA"

UNRELIABLE SPEED INDICATION

"UNRELIABLE SPEED"

TCAS

- **For aircraft equipped with AP/FD TCAS ◁ function:**

  As soon as a TA is triggered:
  - If the AP/FD TCAS mode is armed: "TCAS blue"
  - If the AP/FD TCAS mode does not arm: "TCAS, I have control"

- **For aircraft not equipped with AP/FD TCAS ◁ function:**

  As soon as a TA is triggered: "TCAS, I have control".

EMERGENCY DESCENT

"EMERGENCY DESCENT"

LOSS OF BRAKING

"LOSS OF BRAKING"

STALL RECOVERY

As soon as any stall indication is recognized.
"STALL, I have control"

STALL WARNING AT LIFT-OFF

"STALL, TOGA 15°"

MALFUNCTION BEFORE V1 AT TAKEOFF

EVENT	CAPT	F/O
If GO decision	GO	
If RTO decision	STOP	
- REV on EWD		REVERSE GREEN (1)
- Deceleration		DECEL (2)
- Autobrake disengagement	MANUAL BRAKING (3)	AUTOBRAKE OFF (4)

(1) *If the reverse deployment is not as expected, call NO REVERSE ENGINE__or NO REVERSE, as appropriate.*

(2) *In the case of failure or no positive deceleration, NO DECEL.*
DECEL callout means that the deceleration is felt by the crew, and confirmed by the speed trend on the PFD.

(3) *CAPT announces MANUAL BRAKING if:*

- *CAPT uses the brake pedals*
- *No AUTOBRAKE OFF callout.*

(4) *F/O announces AUTOBRAKE OFF if:*

- *A/BRK does not engage as expected or A/BRK disengages*
- *No MANUAL BRAKING callout from the CAPT.*

1

APU	EGT > EGT MAX -33 °C (inhibited during APU start)	
	OIL QTY (message LOW OIL LEVEL pulsing)	If there is no oil leak, then the remaining oil quantity allows normal APU operation for about 10 h.

Ident.: PRO-ABN-ABN-ADV-A-00012107.0001001 / 05 MAR 19

2

CAB PR	CAB VERTICAL SPEED V/S > 1 800 ft/min	CPC changeover is recommended: - MODE SEL: MAN - Wait 10 s - MODE SEL: AUTO • If unsuccessful: - MODE SEL: MAN - Manual pressure control
	CAB ALTITUDE altitude ≥ 8 800 ft	PACK FLOW: HI CPC changeover is recommended: - MODE SEL: MAN - Wait 10 s - MODE SEL: AUTO • If unsuccessful: - MODE SEL: MAN - Manual pressure control
	ΔP ≥ 1.5 PSI in phase 7	LDG ELEV: ADJUST • If unsuccessful: - MODE SEL: MAN - Manual pressure control

Ident.: PRO-ABN-ABN-ADV-A-00012112.0001001 / 17 MAR 17

ELEC	IDG OIL TEMP ≥ 147 °C	Reduce IDG load if possible (GALLEY or GEN OFF). If required, restore when temperature has dropped. Restrict use of generator to short time, if temperature rises again excessively.

Continued on the following page

Continued from the previous page

Ident.: PRO-ABN-ABN-ADV-A-00012122.0003001 / 04 NOV 20

SYSTEM	CONDITIONS	RECOMMENDED ACTION
ENG	OIL PRESS P < 80 PSI	- If the oil pressure is between 80 and 60 PSI, continue normal engine operation. - If the oil pressure is below 60 PSI (red indication) without the ENG 1(2) OIL LO PR alert, continue normal engine operation (it can be assumed that the oil pressure transducer is faulty). In both cases, monitor other engine parameters, particularly oil temperature and oil quantity.
	OIL PRESS P > 390 PSI	Closely monitor other engine parameters for symptoms of engine malfunction. If high oil pressure is not accompanied by other abnormal indications operate engine normally for remainder of the flight. Record high oil pressure, and corresponding N2 readings for maintenance action.
	OIL TEMP T > 155 °C	An increase in oil temperature during normal steady-state operation indicates a system malfunction and should be closely monitored for other symptoms of engine malfunction. *Note: If the OIL TEMP increase follows thrust reduction: Increasing thrust may reduce oil temperature.* In addition, an increase in oil temperature could be related to the IDG oil cooling system. To decrease oil temperature, before limits are reached, the following are recommended: 1. Low Speed - Increase engine speed to increase fuel flow and thereby cool IDG oil. 2. High Speed - Reduce generator load or turn off generator. If oil temperature continues to rise, mechanically disconnect IDG.
	OIL QTY < 5 qt	The oil quantity in the tank can decrease at high thrust setting due to the effect of oil gulping. In that case, the indicated oil quantity will increase after thrust reduction. Monitor the affected engine oil parameters and crosscheck with the other engine - As long as the oil temperature and the oil pressure of the affected engine remain within limits, normal engine operation is not affected. If the oil quantity continues to decrease, both of the following ECAM alerts can be triggered: - ENG 1(2) OIL LO PR (*Refer to PRO-ABN-ENG ENG 1(2) OIL LO PR (Caution) - ANNUNCIATION*)

Continued on the following page

Continued from the previous page

SYSTEM	CONDITIONS	RECOMMENDED ACTION
		- ENG 1(2) OIL LO PR (*Refer to PRO-ABN-ENG ENG 1(2) OIL LO PR (Warning) - ANNUNCIATION*)
	NAC TEMP ≥ 320 °C	Monitor engine parameters and crosscheck with other engine.
	VIBRATION N1 ≥ 5 units N2 ≥ 5 units	*Refer to PRO-ABN-ENG [QRH] HIGH ENGINE VIBRATION*.

SYSTEM	CONDITIONS	RECOMMENDED ACTION
ENG	OIL PRESS P < 80 PSI	- If the oil pressure is between 80 and 60 PSI, continue normal engine operation. - If the oil pressure is below 60 PSI (red indication) without the ENG 1(2) OIL LO PR alert, continue normal engine operation (it can be assumed that the oil pressure transducer is faulty). In both cases, monitor other engine parameters, particularly oil temperature and oil quantity.
	OIL PRESS P > 390 PSI	Closely monitor other engine parameters for symptoms of engine malfunction. If high oil pressure is not accompanied by other abnormal indications operate engine normally for remainder of the flight. Record high oil pressure, and corresponding N2 readings for maintenance action.
	OIL TEMP T > 155 °C	An increase in oil temperature during normal steady-state operation indicates a system malfunction and should be closely monitored for other symptoms of engine malfunction. *Note: If the OIL TEMP increase follows thrust reduction: Increasing thrust may reduce oil temperature.* In addition, an increase in oil temperature could be related to the IDG oil cooling system. To decrease oil temperature, before limits are reached, the following are recommended: 1. Low Speed - Increase engine speed to increase fuel flow and thereby cool IDG oil. 2. High Speed - Reduce generator load or turn off generator. If oil temperature continues to rise, mechanically disconnect IDG.
	OIL QTY < 5 qt	The oil quantity in the tank can decrease at high thrust setting due to the effect of oil gulping. In that case, the indicated oil quantity will increase after thrust reduction. Monitor the affected engine oil parameters and crosscheck with the other engine - As long as the oil temperature and the oil pressure of the affected engine remain within limits, normal engine operation is not affected. If the oil quantity continues to decrease, both of the following ECAM alerts can be triggered: - ENG 1(2) OIL LO PR (*Refer to PRO-ABN-ENG ENG 1(2) OIL LO PR (Caution) - ANNUNCIATION*)

18

SYSTEM	CONDITIONS	RECOMMENDED ACTION
ENG	OIL PRESS P < amber threshold value	- If the oil pressure indication is amber, continue normal engine operation. - If the oil pressure indication becomes red without the ENG 1(2) OIL LO PR alert, continue normal engine operation. In both cases, monitor other engine parameters, particularly oil temperature and oil quantity.
	OIL PRESS P > 259 PSI	Closely monitor other engine parameters for symptoms of engine malfunction. If a high oil pressure is not accompanied by other abnormal indications, operate the engine normally for the remainder of flight. Record high oil pressure, and corresponding N2 readings, for maintenance action.
	OIL TEMP Oil temperature above the advisory threshold and below the caution threshold.	An increase in oil temperature during normal steady-state operation indicates a system malfunction and should be closely monitored for other symptoms of engine malfunction. Note: *If the OIL TEMP increases at thrust reduction, consider increasing the thrust again in order to attempt to lower the oil temperature.* In addition, an increase in oil temperature could be related to the IDG oil cooling system. To reduce oil temperature, before limits are reached, the following are recommended: 1. Low Speed - Increase engine speed to increase fuel flow and thereby cool IDG oil. 2. High Speed - Reduce generator load or turn off generator. If the oil temperature continues to rise, mechanically disconnect IDG.
	OIL QTY < 1.45 QT	The oil quantity in the tank can decrease at high thrust setting due to the effect of oil gulping. In that case, the indicated oil quantity will increase after thrust reduction. Monitor the affected engine oil parameters and crosscheck with the other engine - As long as the oil temperature and the oil pressure of the affected engine remain within limits, normal engine operation is not affected. If the oil quantity continues to decrease, both of the following ECAM alerts can be triggered: - ENG 1(2) OIL LO PR (*Refer to PRO-ABN-ENG ENG 1(2) OIL LO PR (Caution) - ANNUNCIATION*)

SYSTEM RESET - GENERAL

Applicable to: ALL

Ident.: PRO-ABN-ABN-RESET-A-00012644.0001001 / 17 MAR 17

Some systems that operate abnormally can be recovered by a reset. The flight crew can perform a system reset with the use of:

- The associated cockpit control, or
- The associated circuit breaker.

WARNING	Only perform one reset at a time, unless indicated differently.

Ident.: PRO-ABN-ABN-RESET-A-00012645.0001001 / 17 MAR 17

Guidelines to reset a system:

- Set the related normal cockpit control to OFF, or pull the corresponding circuit breaker
- Wait 3 s if a normal cockpit control is used, or 5 s if a circuit breaker is used (unless a different time is indicated)
- Set the related normal cockpit control to ON, or push the corresponding circuit breaker
- Wait 3 s for the end of the reset.

Note: *The flight crew should report any in-flight reset to the maintenance.*

Ident.: PRO-ABN-ABN-RESET-A-00014340.0001001 / 05 JUN 18

■ On ground:

Reset ECU (CFM) or EEC (IAE) or EIU only when engine shut down.

Reset BSCU only when aircraft stopped.
Reset ELAC or SEC only when listed in the System Reset Table.

Other Systems not listed in the System Reset Table can be reset following the guidelines described above.

■ In flight:

WARNING	The flight crew can attempt a system reset only when: - An ECAM/OEB/FCOM/QRH procedure requests to reset the system, or - The System Reset Table permits.

CAUTION	Do not pull the following circuit breakers: - SFCC - ECU or EEC or EIU.

Note: *Before taking any action on the cockpit C/Bs, both the PF and PM must crosscheck and ensure the C/B label corresponds to the affected system.*

Refer to System Reset Table.

SYSTEM RESET TABLE

Applicable to: MSN 01143-01246, 01376-01518, 01593-01628, 01825, 01832

Ident.: PRO-ABN-ABN-RESET-B-00012654.0001001 / 06 MAY 22

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
A-ICE	ANTI ICE L(R) WINDSHIELD(WINDOW) (WHC)	**On ground only:** If the air conditioning packs are OFF with the OAT above 40 °C, and/or the windshield is under direct sunlight, a spurious ANTI ICE L(R) WINDSHIELD(WINDOW) alert may trigger. In this case, apply the following reset procedure: - Set both PACKS to ON - Wait 5 min - Pull the C/B X13 on 122VU (WHC1), or W13 on 122VU (WHC2) - Push it after 5 s.

Continued on the following page

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
1 AUTO FLT	AUTO FLT A/THR OFF	**On ground, before taxi only:** • If no engine running: - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR. • If at least one engine is running: - Apply external power or APU generator power - ENG MASTER (running engine(s))…………………………..OFF - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR.
	AUTO FLT FCU 1(2) FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - If AUTO FLT FCU 1(2) FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1(2) FAULT remains, pull both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 s for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful).
	AUTO FLT FCU 1 + 2 FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push them after 5 s

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		- Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push the C/Bs after 5 s - If AUTO FLT FCU 1+2 FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1+2 FAULT remains, pull again both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 seconds for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful). FCU targets are synchronized on current aircraft values and displayed as selected targets. - Re–enter the barometer altimeter setting value, if necessary.
	AUTO FLT YAW DAMPER 1(2) (FAC 1(2))	**In flight:** If AP is inoperative: - Set FAC 1(2) pb to OFF - Wait 3 s - Set FAC 1(2) pb to ON.
	CAT 3 DUAL displayed in INOP SYS without any other ECAM alert (FAC)	**On ground, or in flight:** Note: *If the CAT 3 DUAL INOP SYS is associated with another ECAM message (in particular ADR FAULT or IR FAULT), it means that the root cause is not an ADR or IR rejection by FAC or FMGC. Consequently, change of AP or FAC reset will not clear the CAT 3 DUAL INOP.* If CAT 3 DUAL is displayed in INOP SYS without any other failure being detected: - Change the AP in command. If unsuccessful: - Set FAC 1 pb to OFF - Wait 3 s - Set FAC 1 pb to ON.

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		Wait for AUTO FLT FAC 1 FAULT to disappear, and: - Set FAC 2 pb to OFF - Wait 3 s - Set FAC 2 pb to ON.
	One MCDU locked or blank (MCDU)	**On ground, or in flight:** - Pull the C/B for the locked or blank MCDU and push it back after 10 s. The circuit breakers for the MCDUs are: • AUTO FLT/MCDU 1 B1 ON 49 VU (Overhead Panel) • AUTO FLT/MCDU 2 N20 ON 121 VU (Right Rear Maintenance Panel) • AUTO FLT/MCDU 3 N21 ON 121 VU (Right Rear Maintenance Panel).
	Both MCDU locked or blank or FMGC malfunction (FMGC)	The circuit breakers for the FMGCs are: • AUTO FLT/FMGC 1 B2 ON 49 VU (Overhead Panel) • AUTO FLT/FMGC 2 M17 ON 121 VU (Right Rear Maintenance Panel). **On ground:** • If no engine running: - Apply external power or APU generator power - Wait 2 min before resetting the FMGC circuit breakers - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC. • If engines running: - Set FD 1(2) pb to OFF. - Pull the C/B of the affected FMGC. - Wait 10 s. - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC. • If FMGC reset is unsuccessful: - Consider FMGC reset with engines not running.

Continued on the following page

Continued from the previous page

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
		Note: The FMGC reset is more effective with engines not running. **In flight:** - Set non-affected AP 2(1) pb to ON - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC.

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: After any BSCU reset:
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: After any BSCU reset:
		- Record BSCU reset in the logbook.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS, DCL, OCL or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note:* *As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note:* *The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: After any BSCU reset:
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: After any BSCU reset:
		- Record BSCU reset in the logbook.

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
AUTO FLT	AUTO FLT A/THR OFF	**On ground, before taxi only:** • If no engine running: - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR. • If at least one engine is running: - Apply external power or APU generator power - ENG MASTER (running engine(s))...............................OFF - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR.
	AUTO FLT FCU 1(2) FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - If AUTO FLT FCU 1(2) FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1(2) FAULT remains, pull both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 s for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful).
	AUTO FLT FCU 1 + 2 FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push them after 5 s

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		- Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push the C/Bs after 5 s - If AUTO FLT FCU 1+2 FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1+2 FAULT remains, pull again both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 seconds for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful). FCU targets are synchronized on current aircraft values and displayed as selected targets. - Re–enter the barometer altimeter setting value, if necessary.
	AUTO FLT YAW DAMPER 1(2) (FAC 1(2))	**In flight:** If AP is inoperative: - Set FAC 1(2) pb to OFF - Wait 3 s - Set FAC 1(2) pb to ON.
	CAT 3 DUAL displayed in INOP SYS without any other ECAM alert (FAC)	**On ground, or in flight:** Note: *If the CAT 3 DUAL INOP SYS is associated with another ECAM message (in particular ADR FAULT or IR FAULT), it means that the root cause is not an ADR or IR rejection by FAC or FMGC. Consequently, change of AP or FAC reset will not clear the CAT 3 DUAL INOP.* If CAT 3 DUAL is displayed in INOP SYS without any other failure being detected: - Change the AP in command. If unsuccessful: - Set FAC 1 pb to OFF - Wait 3 s - Set FAC 1 pb to ON.

BRAKES	BRAKES SYS 1(2) FAULT or BRAKES BSCU CH 1(2) FAULT (BSCU)	**On ground:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. • IF UNSUCCESSFUL: - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1 - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2 - Push C/Bs. After a successful reset, resume to normal operation. *Note: After any BSCU reset:* *1. Check brake efficiency* *2. Record BSCU reset in the logbook.* **In flight:** When landing gear is up only: - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON - If required, rearm the autobrake. When landing gear is down: reset not authorized. *Note: After any BSCU reset:* *- Record BSCU reset in the logbook.*

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: *After any BSCU reset:*
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: *After any BSCU reset:*
		- Record BSCU reset in the logbook.

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure

Ident.: PRO-ABN-ABN-RESET-B-00024311.0001001 / 10 MAY 21

COM	SATCOM ◁✳ malfunction (SATCOM ◁✳)	**On ground, or in flight:** - Pull the SATCOM C/B K01 on 121VU - Wait 5 s - Push the SATCOM C/B K01on 121VU. *Note:* - *SDUshould reset in less than 2 min* - *The flight crew cannot perform a software reset for SATCOM via the MCDU.*

Ident.: PRO-ABN-ABN-RESET-B-00024336.0001001 / 10 MAY 21

COND	COND TRIM AIR SYS FAULT (ACSC)	**On ground only:** - Pull C/Bs W21 and W22 on 122VU - Pull C/Bs X21 and X22 on 122VU - Pull C/Bs Y18, Y20 and Y21 on 122VU - Pull C/B D8 on 49VU - Wait 5 s before pushing all the C/Bs. *Note:* *During the reset, a small increase of the engine thrust may be observed (N1 or EPR, as applicable). If the parking brake is set, vibrations can occur.*

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS, DCL, OCL or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

FUEL	Loss of fuel quantity indication or Simultaneous triggering of FUEL L OUTER XFR CLOSED and FUEL R OUTER XFR CLOSED, although FUEL SD indicates no anomaly. (FQIC)	**On ground, or in flight:**
		- Pull the 3 C/Bs:
		  • Channel 1 (A13 on 49VU)
		  • Channel 2 (M27 on 121VU)
		  • Channel 1 and 2 (L26 on 121VU).
		- Wait 5 s, before pushing the 3 C/Bs.
		Note: *The fuel quantity indication will be re-established within 1 min.*
		CAUTION The FUEL AUTO FEED FAULT caution will be lost for the remainder of the flight.
		In flight:
		- If center tank is not empty, while one inner tank contains less than 5 000 kg (11 000 lb) of fuel:
		  • FUEL MODE SEL (MAN)
		- When center tank is empty:
		  • CTR TK PUMP 1 and 2 (OFF)
		  • FUEL MODE SEL (MAN)

Ident.: PRO-ABN-ABN-RESET-B-00012655.0002001 / 20 MAR 17

FWC	FWS FWC 1(2) FAULT (FWC)	**On ground:** Pull, then push, the C/B of the affected FWC: - FWC 1 (F01 on 49VU) - FWC 2 (Q7 on 121VU). Wait 50 s after pushing the C/Bs. **In flight:** Pull, then push, the C/B of the affected FWC: - FWC 1 (F01 on 49VU) - FWC 2 (Q7 on 121VU).

Ident.: PRO-ABN-ABN-RESET-B-00021057.0003001 / 05 MAR 19

L/G	L/G LGCIU 1(2) FAULT (LGCIU 1(2))	**On ground only:** The flight crew must depressurize the green hydraulic system before resetting the LGCIU: - ENG 1 PUMP OFF - PTU OFF. When there is no green hydraulic pressure: - To reset LGCIU 1: • Pull C/B Q34 on 121VU, then C09 on 49VU, then R32 on 121VU. • Wait for 15 s , then push the C/Bs. - To reset LGCIU 2: • Pull C/B Q35 on 121VU, then R33 on 121VU. • Wait for 15 s , then push the C/Bs. After the LGCIU reset, restore green hydraulic pressure (ENG 1 PUMP ON, PTU AUTO).

Ident.: PRO-ABN-ABN-RESET-B-00012657.0008001 / 20 MAR 17

NAV	NAV TCAS FAULT (TCAS)	**On ground only:** - Pull C/B K10 on 121VU - Wait 5 s, then push the C/B.
	ISIS malfunction (ISIS)	**On ground only:** With aircraft not moving: - Pull C/B F12 on 49VU - Wait 5 s, then push the C/B - Normal operation is expected after approximately 2 min. *Note: In the case of small aircraft motion during the C/B reset (refueling, cargo loading conditions, etc.), the ATT red flag may appear on the ISIS. In this case, press the RST P/B for 2 s wait 2 min additional to recover normal operation.*

VENT	VENT AVNCS SYS FAULT (AEVC)	**On ground only:** - Pull C/B Y17 on 122VU - Wait 30 s before pushing the C/B.

Ident.: PRO-ABN-ABN-RESET-B-00021058.0001001 / 17 MAY 21

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note: After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
AUTO FLT	AUTO FLT A/THR OFF	**On ground, before taxi only:** • If no engine running: - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR. • If at least one engine is running: - Apply external power or APU generator power - ENG MASTER (running engine(s))...............................OFF - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR.
	AUTO FLT FCU 1(2) FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - If AUTO FLT FCU 1(2) FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1(2) FAULT remains, pull both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 s for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful).
	AUTO FLT FCU 1 + 2 FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push them after 5 s

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		- Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push the C/Bs after 5 s - If AUTO FLT FCU 1+2 FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1+2 FAULT remains, pull again both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 seconds for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful). FCU targets are synchronized on current aircraft values and displayed as selected targets. - Re–enter the barometer altimeter setting value, if necessary.
	AUTO FLT YAW DAMPER 1(2) (FAC 1(2))	**In flight:** If AP is inoperative: - Set FAC 1(2) pb to OFF - Wait 3 s - Set FAC 1(2) pb to ON.
	CAT 3 DUAL displayed in INOP SYS without any other ECAM alert (FAC)	**On ground, or in flight:** Note: *If the CAT 3 DUAL INOP SYS is associated with another ECAM message (in particular ADR FAULT or IR FAULT), it means that the root cause is not an ADR or IR rejection by FAC or FMGC. Consequently, change of AP or FAC reset will not clear the CAT 3 DUAL INOP.* If CAT 3 DUAL is displayed in INOP SYS without any other failure being detected: - Change the AP in command. If unsuccessful: - Set FAC 1 pb to OFF - Wait 3 s - Set FAC 1 pb to ON.

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		Wait for AUTO FLT FAC 1 FAULT to disappear, and: - Set FAC 2 pb to OFF - Wait 3 s - Set FAC 2 pb to ON.
	One MCDU locked or blank (MCDU)	**On ground, or in flight:** - Pull the C/B for the locked or blank MCDU and push it back after 10 s. The circuit breakers for the MCDUs are: • AUTO FLT/MCDU 1 B1 ON 49 VU (Overhead Panel) • AUTO FLT/MCDU 2 N20 ON 121 VU (Right Rear Maintenance Panel) • AUTO FLT/MCDU 3 N21 ON 121 VU (Right Rear Maintenance Panel).
	Both MCDU locked or blank or FMGC malfunction (FMGC)	The circuit breakers for the FMGCs are: • AUTO FLT/FMGC 1 B2 ON 49 VU (Overhead Panel) • AUTO FLT/FMGC 2 M17 ON 121 VU (Right Rear Maintenance Panel). **On ground:** • If no engine running: - Apply external power or APU generator power - Wait 2 min before resetting the FMGC circuit breakers - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC. • If engines running: - Set FD 1(2) pb to OFF. - Pull the C/B of the affected FMGC. - Wait 10 s. - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC. • If FMGC reset is unsuccessful: - Consider FMGC reset with engines not running.

Continued on the following page

Continued from the previous page

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
		Note: The FMGC reset is more effective with engines not running. **In flight:** - Set non-affected AP 2(1) pb to ON - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC.

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: After any BSCU reset:
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: After any BSCU reset:
		- Record BSCU reset in the logbook.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU ◁	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS ◁ , DCL ◁ , OCL ◁ or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS ◁	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3 ◁)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

VENT	VENT AVNCS SYS FAULT (AEVC)	**On ground only:** - Pull C/B Y17 on 122VU - Wait 30 s before pushing the C/B.

Ident.: PRO-ABN-ABN-RESET-B-00021058.0001001 / 17 MAY 21

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note:* *After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU ◁	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS ◁ , DCL ◁ , OCL ◁ or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note:* *As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS ◁	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note:* *The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3 ◁)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note:* *After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU ◁✳	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS ◁✳ , DCL ◁✳ , OCL ◁✳ or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS ◁✳	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3 ◁✳)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: After any BSCU reset:
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: After any BSCU reset:
		- Record BSCU reset in the logbook.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS , DCL , OCL or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note:* *As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note:* *The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

VENT	VENT AVNCS SYS FAULT (AEVC)	**On ground only:** - Pull C/B Y17 on 122VU - Wait 30 s before pushing the C/B.

Ident.: PRO-ABN-ABN-RESET-B-00021058.0001001 / 17 MAY 21

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note:* *After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		Wait for AUTO FLT FAC 1 FAULT to disappear, and: - Set FAC 2 pb to OFF - Wait 3 s - Set FAC 2 pb to ON.
	One MCDU locked or blank (MCDU)	**On ground, or in flight:** - Pull the C/B for the locked or blank MCDU and push it back after 10 s. The circuit breakers for the MCDUs are: - AUTO FLT/MCDU 1 B1 ON 49 VU (Overhead Panel) - AUTO FLT/MCDU 2 N20 ON 121 VU (Right Rear Maintenance Panel) - AUTO FLT/MCDU 3 N21 ON 121 VU (Right Rear Maintenance Panel).

	Both MCDU locked or blank or FMGC malfunction
	(FMGC)
		The circuit breakers for the FMGCs are:
		- AUTO FLT/FMGC 1 B2 ON 49 VU (Overhead Panel)
		- AUTO FLT/FMGC 2 M17 ON 121 VU (Right Rear Maintenance Panel).
		On ground:
		- If no engine running:
		  - Apply external power or APU generator power
		  - Wait 2 min before resetting the FMGC circuit breakers
		  - Set FD 1(2) pb to OFF
		  - Pull the C/B of the affected FMGC
		  - Wait 10 s
		  - Push the C/B of the affected FMGC.
		CAUTION Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC.
		- If engines running:
		  - Set FD 1(2) pb to OFF.
		  - Pull the C/B of the affected FMGC.
		  - Wait 10 s.
		  - Push the C/B of the affected FMGC.
		CAUTION Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC.
		- If FMGC reset is unsuccessful:
		  - Consider FMGC reset with engines not running.

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		Note: *The FMGC reset is more effective with engines not running.* **In flight:** - Set non-affected AP 2(1) pb to ON - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC.

Ident.: PRO-ABN-ABN-RESET-B-00022080.0001001 / 03 NOV 22

63

DATALINK	ATSU	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS , DCL , OCL or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
NAV	NAV GPWS FAULT and NAV GPWS TERR DET FAULT (EGPWS)	**On ground, or in flight:** Perform the following reset when both alerts are displayed at the same time. - Pull C/B P07 on 121VU, - Set GPWS SYS pb and GPWS TERR pb to ON, - Wait 5 s, then push the C/B.
	NAV GPWS FAULT or NAV GPWS TERR DET FAULT (EGPWS)	**On ground only:** - Pull C/B P07 on 121VU, - Set GPWS SYS pb and GPWS TERR pb to ON, - Wait 5 s, then push the C/B.
	NAV TCAS FAULT (TCAS)	**On ground only:** - Pull C/B K10 on 121VU. - Wait 5 s, then push the C/B.
	ISIS malfunction (ISIS)	**On ground only:** With aircraft not moving: - Pull C/B F12 on 49VU, - Wait 5 s, then push the C/B, - Normal operation is expected after approximately 2 min. *Note:* *In the case of small aircraft motion during the C/B reset (refueling, cargo loading conditions, etc.), the ATT red flag may appear on the ISIS. In this case, press the RST P/B for 2 s and wait 2 min additional to recover normal operation.*

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
VENT	VENT AVNCS SYS FAULT (AEVC)	**On ground only:** - Pull C/B Y17 on 122VU - Wait 30 s before pushing the C/B.
WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note:* *After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
AUTO FLT	AUTO FLT A/THR OFF	**On ground, before taxi only:** • If no engine running: - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR. • If at least one engine is running: - Apply external power or APU generator power - ENG MASTER (running engine(s))…………………………..OFF - Press FCU A/THR pb in order to re-engage the A/THR (this will cancel the ECAM alert) - Press A/THR instinctive disconnect pb to disconnect A/THR.
	AUTO FLT FCU 1(2) FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, or M21 on 121VU for FCU 2 - Push it after 5 s - If AUTO FLT FCU 1(2) FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1(2) FAULT remains, pull both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 s for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful).
	AUTO FLT FCU 1 + 2 FAULT (FCU)	**In flight:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push them after 5 s

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		- Check the displayed targets and the barometer reference, and correct them if necessary. **On ground:** - Pull the C/B B05 on 49VU for FCU 1, and then pull M21 on 121VU for FCU 2 - Push the C/Bs after 5 s - If AUTO FLT FCU 1+2 FAULT disappears, check the displayed targets and barometer reference, and correct them if necessary (RESET successful) - If AUTO FLT FCU 1+2 FAULT remains, pull again both C/B B05 on 49VU and M21 on 121VU - Push them after 7 min , with a delay of less than 5 s between side 1 and 2 - Wait at least 30 seconds for FCU 1 and FCU 2 safety tests completion - Check the displayed targets and barometer reference, and correct them if necessary (RESET successful). FCU targets are synchronized on current aircraft values and displayed as selected targets. - Re–enter the barometer altimeter setting value, if necessary.
	AUTO FLT YAW DAMPER 1(2) (FAC 1(2))	**In flight:** If AP is inoperative: - Set FAC 1(2) pb to OFF - Wait 3 s - Set FAC 1(2) pb to ON.
	CAT 3 DUAL displayed in INOP SYS without any other ECAM alert (FAC)	**On ground, or in flight:** Note: *If the CAT 3 DUAL INOP SYS is associated with another ECAM message (in particular ADR FAULT or IR FAULT), it means that the root cause is not an ADR or IR rejection by FAC or FMGC. Consequently, change of AP or FAC reset will not clear the CAT 3 DUAL INOP.* If CAT 3 DUAL is displayed in INOP SYS without any other failure being detected: - Change the AP in command. If unsuccessful: - Set FAC 1 pb to OFF - Wait 3 s - Set FAC 1 pb to ON.

Continued on the following page

Continued from the previous page

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
		Wait for AUTO FLT FAC 1 FAULT to disappear, and: - Set FAC 2 pb to OFF - Wait 3 s - Set FAC 2 pb to ON.
	One MCDU locked or blank (MCDU)	**On ground, or in flight:** - Pull the C/B for the locked or blank MCDU and push it back after 10 s. The circuit breakers for the MCDUs are: • AUTO FLT/MCDU 1 B1 ON 49 VU (Overhead Panel) • AUTO FLT/MCDU 2 N20 ON 121 VU (Right Rear Maintenance Panel) • AUTO FLT/MCDU 3 N21 ON 121 VU (Right Rear Maintenance Panel).
	Both MCDU locked or blank or FMGC malfunction (FMGC)	The circuit breakers for the FMGCs are: • AUTO FLT/FMGC 1 B2 ON 49 VU (Overhead Panel) • AUTO FLT/FMGC 2 M17 ON 121 VU (Right Rear Maintenance Panel). **On ground:** • If no engine running: - Apply external power or APU generator power - Wait 2 min before resetting the FMGC circuit breakers - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC. • If engines running: - Set FD 1(2) pb to OFF. - Pull the C/B of the affected FMGC. - Wait 10 s. - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC. • If FMGC reset is unsuccessful: - Consider FMGC reset with engines not running.

Continued on the following page

Continued from the previous page

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
		Note: The FMGC reset is more effective with engines not running. **In flight:** - Set non-affected AP 2(1) pb to ON - Set FD 1(2) pb to OFF - Pull the C/B of the affected FMGC - Wait 10 s - Push the C/B of the affected FMGC. **CAUTION** Always wait 1 min after the PLEASE WAIT message disappears from the MCDU, before engaging or reengaging the FDs and the AP of the reset FMGC.

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: After any BSCU reset:
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: After any BSCU reset:
		- Record BSCU reset in the logbook.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS , DCL , OCL or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**

L/G	L/G LGCIU 1(2) FAULT
	(LGCIU 1(2))
		On ground only:
		The flight crew must depressurize the green hydraulic system before resetting the LGCIU:
		- ENG 1 PUMP OFF
		- PTU OFF.
		When there is no green hydraulic pressure:
		- To reset LGCIU 1:
		  • Pull C/B Q34 on 121VU, then C09 on 49VU, then R32 on 121VU.
		  • Wait for 15 s , then push the C/Bs.
		- To reset LGCIU 2:
		  • Pull C/B Q35 on 121VU, then R33 on 121VU.
		  • Wait for 15 s , then push the C/Bs.
		After the LGCIU reset, restore green hydraulic pressure (ENG 1 PUMP ON, PTU AUTO).

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note: After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

BRAKES	BRAKES SYS 1(2) FAULT
	or
	BRAKES BSCU CH 1(2) FAULT
	(BSCU)
		On ground:
		- STOP aircraft
		- Set PARK BRK handle to ON
		- Confirm that towing bar is disconnected
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON.
		• IF UNSUCCESSFUL:
		  - Pull C/Bs M33 and M34 on 121VU for BSCU channel 1
		  - Pull C/Bs M36 and M35 on 121VU for BSCU channel 2
		  - Push C/Bs.
		After a successful reset, resume to normal operation.
		Note: After any BSCU reset:
		1. Check brake efficiency
		2. Record BSCU reset in the logbook.
		In flight:
		When landing gear is up only:
		- Set A/SKID & N/W STRG sw to OFF
		- Set A/SKID & N/W STRG sw to ON
		- If required, rearm the autobrake.
		When landing gear is down: reset not authorized.
		Note: After any BSCU reset:
		- Record BSCU reset in the logbook.

ECAM System	System malfunction or ECAM Alert (Affected System)	Reset Procedure
DATALINK	ATSU	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS, DCL, OCL or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note:* *After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
DATALINK	ATSU ◁	The ATSU reset should be attempted, only if: - INVALID DATA is displayed on the DCDU, or - Key selection has no effect on the DCDU or any of the MCDU ATSU DATALINK submenus, or - ADS-C, CPDLC, D-ATIS ◁ , DCL ◁ , OCL ◁ or AOC is inoperative. **On ground or in flight:** - Pull the C/Bs in the following order: L16, L15 on 121VU - Wait 5 s, then - Push the C/Bs in the following order: L15, L16. When the ATSU is reset, the following connections are no longer active: - CPDLC: • The flight crew should send a notification to the ATC center to re-establish the CPDLC connection. - ADS-C: • The flight crew must check that ADS-C is ARMED or ON. • The flight crew should contact the ATC center by voice to re-establish the ADS-C connection. *Note: As no ADS-C disconnect message is sent, the ATC center(s) consider that the ADS-C connection is still alive.*
	CINS ◁	If there is a malfunction of the CINS and if the reset by the cabin crew is unsuccessful, the flight crew can attempt to reset the system using the CINS RESET pb on the panel 45VU on the overhead panel. *Note: The CINS reset may take up to 10 min.*
	DATALINK ATC FAULT or DATALINK COMPANY FAULT or COM VHF 3 DATA FAULT (VHF3 ◁)	**On ground or in flight:** - Pull the COM / VHF3 C/B L05 on 121VU - Wait 5 s - Push the COM / VHF3 C/B L05 on 121VU.

ECAM System	**System malfunction or ECAM Alert (Affected System)**	**Reset Procedure**
NAV	NAV GPWS FAULT and NAV GPWS TERR DET FAULT (EGPWS)	**On ground, or in flight:** Perform the following reset when both alerts are displayed at the same time. - Pull C/B P07 on 121VU, - Set GPWS SYS pb and GPWS TERR pb to ON, - Wait 5 s, then push the C/B.
	NAV GPWS FAULT or NAV GPWS TERR DET FAULT (EGPWS)	**On ground only:** - Pull C/B P07 on 121VU, - Set GPWS SYS pb and GPWS TERR pb to ON, - Wait 5 s, then push the C/B.
	NAV TCAS FAULT (TCAS)	**On ground only:** - Pull C/B K10 on 121VU. - Wait 5 s, then push the C/B.
	ISIS malfunction (ISIS)	**On ground only:** With aircraft not moving: - Pull C/B F12 on 49VU, - Wait 5 s, then push the C/B, - Normal operation is expected after approximately 2 min. Note: *In the case of small aircraft motion during the C/B reset (refueling, cargo loading conditions, etc.), the ATT red flag may appear on the ISIS. In this case, press the RST P/B for 2 s and wait 2 min additional to recover normal operation.*

VENT	VENT AVNCS SYS FAULT (AEVC)	**On ground only:** - Pull C/B Y17 on 122VU - Wait 30 s before pushing the C/B.

Ident.: PRO-ABN-ABN-RESET-B-00021058.0001001 / 17 MAY 21

WHEEL	WHEEL N.W STEER FAULT or WHEEL N/W STRG FAULT (BSCU)	**On ground only:** **Case A** If the three conditions below are fulfilled: - the WHEEL N/W STRG FAULT alert was triggered just after engine start - the N/W STRG DISC memo was displayed before the start of the pushback (before the aircraft starts moving) - the N/W STRG DISC memo remained displayed even after the pushback is finished (nosewheel steering selector bypass pin is in the steering position). Apply the below reset procedure. If the ECAM alert disappears after the reset, the flight crew may continue the flight without troubleshooting. **Case B** In all other cases, including in case of doubt on the above conditions, troubleshooting must be performed before continuing the flight, even if the ECAM alert disappears after the reset. For a return to the gate : - Apply the below reset procedure - The taxi speed must not exceed 10 kt. **Reset Procedure:** - STOP aircraft - Set PARK BRK handle to ON - Confirm that towing bar is disconnected - Set A/SKID & N/W STRG sw to OFF - Set A/SKID & N/W STRG sw to ON. *Note:* *After any BSCU reset:* *1. Check brake efficiency* *2. Check absence of aircraft veering* *3. Record the BSCU reset in the logbook.*
